

- NEW SERVICE OFFERING — POWERED BY ANTHROPIC CLAUDE

Introducing **RDI Data ClarityCast™**

Supercharge Your AI Enablement with **Semantic Modelling & Claude**

RDI Data ClarityCast™ is our breakthrough service offering built on a strategic partnership with Anthropic — casting the full clarity of your governed, semantically-rich enterprise data directly into Claude's AI reasoning, so every answer your organization receives is trusted, traceable, and transformation-ready.

WHAT RDI DATA CLARITYCAST™ DELIVERS

Cast the Full Clarity of Your Data into Every AI Response

Most enterprises deploying AI are doing so on shaky foundations — unverified data, undefined ownership, and no semantic context. RDI Data ClarityCast™ changes that. By pairing Collibra's world-class data governance catalogue with Anthropic's Claude, ClarityCast™ broadcasts your organization's certified business definitions, metadata lineage, and data stewardship rules directly into Claude's reasoning layer. The result: AI responses that don't just sound right — they *are* right, grounded in the same governed data your compliance, finance, and operations teams rely on every day. ClarityCast™ is built on RDI's Data Product Maturity Framework and delivered as part of our AI Readiness Plan & Enablement Service, giving you a clear, measurable path from data governance maturity to enterprise AI confidence.

Semantic Broadcasting

ClarityCast™ transmits your Collibra-governed business glossary, data ownership structures, and certified definitions directly into Claude's context — so every AI query is answered through the lens of *your* enterprise vocabulary, not generic training data.

Governed & Auditable AI Responses

Every Claude-generated insight is anchored to a traceable, catalogued data asset. With RDI Data Command™ managing your governance layer, your AI outputs meet the same compliance and auditability standards as your regulated data pipeline.

Fast Path from Catalogue to Claude

RDI's Data Intelligence Launchpad™ compresses your AI readiness journey from months to weeks. Pre-built Collibra-to-Claude integration blueprints, a proven Reference Architecture, and RDI's hands-on delivery team get you broadcasting clarity from day one.

Maturity-Driven AI Expansion

ClarityCast™ is designed to grow with you. As your organization advances through RDI's four-level Data Product Maturity Framework, the semantic signal feeding Claude becomes richer, deeper, and more autonomous — transforming AI from a point tool into a strategic intelligence engine.

“With RDI Data ClarityCast™, we are not just connecting Claude to your data — we are ensuring Claude understands your data the way your best analyst does. Governed definitions, clear ownership, certified lineage: that is the semantic clarity we cast into every AI response. The future belongs to organizations that can transform their data assets into strategic AI advantages — and ClarityCast™ is how you get there.”
